

Avento Reclining Height-Adjustable Relax Chair

“The chairs are great! The height adjustment, recline and movement features are all great and we love the vibrant colour!”

Key Features

The height-adjustable Avento enables clinicians to position the chair at a comfortable height to effectively deliver treatment and focus on the patient's needs whilst reducing back care issues for the clinician.

There are three versions; manual with a hydraulic foot pump for height adjustment and gas strut assisted recline with a choice of central or individual locking castors or electric, with separate or combined electric height, backrest and legrest adjustment.

- Easy access to zero gravity position, with fewer pressure points on the body the position promotes good blood circulation
- Easy height adjustment between 490mm and 790mm. This feature allows clinicians to communicate at eye level with patients, delivering a different experience for both clinician and patient
- The ergonomic armrests are height-adjustable and support 3 height positions, at their lowest position they are level with the seat allowing easy side access for patients with mobility issues
- Easy to clean antimicrobial vinyl and a removable seat cushion to aid infection control
- The push handle on the back of the chair allows for easy patient transport and side handles can lock the recline into any position for safe use by the patient, this feature is particularly favourable in maternity and neonatal units
-  23.5 stone/150kg
(Manual versions can be upgraded to 200kg, additional cost, please enquire)

Colour Options

Our nine most popular colours are below, however these chairs are also available in the full Valencia range shown on page 206.
